From a metabolic perspective, the aging process is characterized by changes in body composition, insulin resistance, mitochondrial and autophagy dysfunction, and inflammation. Sat, 08 Dec 2018 04:46:00 GMT AMP-Activated Protein Kinase Regulation of the NLRP3 ... - Proteostasis, a portmanteau of the words protein and homeostasis, is the concept that there are competing and integrated biological pathways within cells that control the biogenesis, folding, trafficking and degradation of proteins present within and outside the cell. The concept of proteostasis maintenance is central to understanding the cause of diseases associated with excessive protein ... Sun, 09 Dec 2018 05:14:00 GMT Proteostasis - Wikipedia - Cancer cells rewire their metabolism to promote growth, survival,

proliferation, and long-term maintenance. The common feature of this altered metabolism is the increased glucose uptake and fermentation of glucose to lactate. This phenomenon is observed even in the presence of completely functioning mitochondria and, together, is known as the "Warburg Effect"™.
