Examples: 1. Let L be the language of all strings consisting of $n \in \mathbb{N}$ followed by $n \in \mathbb{N}$: $L = \{ \epsilon, 01, 0011, 000111, \dots \}$ 2. Sun, 02 Dec 2018 22:11:00 GMT Introduction to Languages and the Theory of Computation - Introduction to Automata Theory, Languages, and Computation Solutions for Chapter 4 Solutions for Section 4.1 Exercise 4.1.1(c) Let n be the pumping-lemma constant (note this n is unrelated to the n that is a local variable in the definition of the language L). Pick $w = 0^n 1 0^n$. Then when we

write $w = xyz$, we know that $|xy| \leq n$, and therefore y consists of only 0's. â€•machinesâ€• Before computers (1930), A. Turing studied an abstract machine (Turing machine) that had all the capabilities of todayâ€™s computers (concerning what they could compute). His goal was to describe precisely the boundary between what a Automata Theory and Languages - UniversitÃ© d'OrlÃ©ans - There is a small matter, however, that this automaton accepts strings with leading 0's. Since the problem calls for accepting only those strings that begin with 1, we need an additional state s , the start state, and an additional "dead state" d . If, in state s , we see a 1 first, we act like q_0 ; i.e., we go to state q_1 . However, if the first input is 0, we should never accept, so we go to state ...
