Codes | Transmission ... - Stress is the force per unit area on a body that tends to cause it to change shape.. Stress is a measure of the internal forces in a body between its particles. These internal forces are a reaction to the external forces applied on the body that cause it to separate, compress or slide. External forces are either surface forces or body forces. Stress is the average force per unit area that a ... To define flux, first there must be a quantity  $q$  which can flow or move, such as mass, energy, electric charge, momentum, number of molecules, etc. Let  $\rho$  be the volume density of this quantity, that is, the amount of  $q$  per unit volume.. The way that this quantity  $q$  is flowing is described by its flux. Introduction- STEAM POWER PLANT: A thermal power station is a power plant in which the prime mover is steam driven. Water is heated, turns into steam and spins a steam turbine which drives an electrical generator. After it passes through the turbine, the steam is condensed in a condenser and recycled to where it was heated; this is known as a Rankine cycle.
